## Pre Calculus BC Properties

1. Determine whether each set is closed for addition. Provide an example if not closed.
a) $\{0,1\}$
b) $\{1,2\}$
c) $\{0,2,4,6 \ldots\}$
d) $\{1,3,5,7 \ldots\}$
e) $\{-1,-2,-3,-4 \ldots$,
2. Use the same sets from \#1 and check for closure under multiplication.

## Each of the problems below, 3-8, refers to the following five operations and sets:

a) $x * y=x+y+1$, Natural \#'s
b) $x * y=\frac{x+y}{x-y}$, Rational \#'s
c) $x * y=x+y-x y$, Integers
d) $x * y=3 x y$, Real \#'s
e)

| $*$ | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: |
| 2 | 4 | 5 | 2 | 3 |
| 3 | 5 | 2 | 3 | 4 |
| 4 | 2 | 3 | 4 | 5 |
| 5 | 3 | 4 | 5 | 2 |

3. For each operation defined above find $2 * 3$.
4. Determine whether the indicated sets are closed under the given operations.
5. Determine whether * is commutative.
6. Determine whether * is associative
7. Determine whether * has an identity,
8. IF there is an identity, find the inverse of 5 .
